

# A Cause for All Cancer?

*Have you ever wondered why some people get cancer and some don't?*

*This revolutionary discovery is resulting in the end of cancer for hundreds of sufferers.*

*And it is so simple!*

by Hulda Regehr Clark, Ph.D., N.D.

(see book review on page 72)

(Editor's Note: Space restrictions did not allow us to publish the exact details for treatment as outlined in Dr Clark's book. For more information on the book itself, please refer to the review on page 72. Some other follow-up details have been supplied at the end of this article.)

For many years we have all believed that cancer is different from other diseases.<sup>1</sup> We believed that cancer behaves like a fire, in that you can't stop it once it has started. Therefore, you have to cut it out or radiate it to death or chemically destroy every cancerous cell in the body since it can never become normal again. Nothing could be more wrong! And we have believed that cancers of different types such as leukaemia or breast cancer have different causes. Wrong again!

In this book you will see that all cancers are alike. They are all caused by a parasite. A single parasite! It is the human intestinal fluke. And if you kill this parasite, the cancer stops immediately. The tissue becomes normal again. In order to get cancer, you must have this parasite.

How can the human intestinal fluke cause cancer? This parasite typically lives in the intestine where it might do little harm, causing only colitis, Crohn's disease or irritable bowel syndrome, or perhaps nothing at all. But if it invades a different organ, like the uterus or kidneys or liver, it does a great deal of harm. If it establishes itself in the liver, it causes cancer! It only establishes itself in the liver in some people. These people have propyl alcohol<sup>2</sup> in their bodies. All cancer patients (100 per cent) have both propyl alcohol and the intestinal fluke in their livers. The solvent propyl alcohol is responsible for letting the fluke establish itself in the liver. In order to get cancer, you must have both the parasite and propyl alcohol in your body.

## Flukes

To understand cancer you should understand the basic facts about the human intestinal fluke. Its scientific name is *Fasciolopsis buskii*. Fluke means "flat", and flukes are one of the families of flatworms. It is as flat as a leaf. The parasite is not unknown: it has been studied since at least 1925.<sup>3</sup>

This parasite has stages that it must go through to keep reproducing. The first stage is the egg. The adult produces millions of eggs. They pass out of us with the bowel movement. The adult, though, stays tightly stuck to our intestine—or liver, causing cancer; or uterus, causing endometriosis; or thymus, causing AIDS; or kidney, causing Hodgkin's disease.

Most of us get little lesions in our intestines from time to time. These tiny sores allow the eggs, which are microscopic in size, to be pulled into the bloodstream (other parasite eggs get into the blood this way, too).

Some of these eggs actually hatch in the intestine or in the blood. The microscopic hatchlings are called *miracidiae* and are the second stage. They swim about with their little swimmer-hairs. And of course, the liver whose job it is to dispose of toxins, will receive them and kill them as the blood arrives from the intestine. They have no chance to survive in normal people.

## Flukes and Propyl Alcohol

But something special happens to people who have propyl alcohol in their bodies. The liver is unable to trap and kill these tiny fluke stages. These baby stages are actually allowed to make their home in the liver and other tissues. It is as if the immune system has no power to kill them. The flukes begin to multiply in people with propyl alcohol in

their bodies! The *miracidia* (hatchlings) start to make little balls inside themselves, called *rediae*. But each *redia* (ball) is alive! It pops itself out of the *miracidia* and begins to reproduce itself. Forty *rediae* can each make 40 more *rediae*! And all of this out of one egg!

This parasite is laying eggs and producing millions of *rediae* right in your body—in your cervix or lungs, wherever your cancer is growing! These *rediae* are swept along in your blood, landing in whatever tissue lets them in. Smokers' lungs, breasts with benign lumps, prostate glands full of heavy metals are examples of tissues that give the *rediae* their landing permits.<sup>4</sup>

Multiplying continues at a hectic pace, generation after generation. *Rediae* are nesting in the liver and other organs. Suddenly they change their shape. They sprout a tail and can swim again. Now they are called *cercariae*.

The *cercariae* only need to find a place to attach. After they glue themselves to your tissue, their tails disappear and they begin to grow a 'cocoon'.

Now they are called *metacercariae*. Normally, this would happen on a leaf growing near a pond, so the *metacercariae* develop an extremely thick shell around themselves to withstand the winter. Does the presence of the solvent propyl alcohol in your body dissolve this tough shell? That would remove the last barrier to the fluke completing its entire life cycle anywhere in your body!

After the shell is gone, they grow into adult flukes in your tissue—not in the intestine, but in your liver! Now the cycle is complete. From egg to *miracidia* to *redia* to *cercaria* to *metacercaria* and then the adults! And all of them eating and sucking and devouring your vital body fluids.

But this is not normal for flukes.

As if these parasites were not fiendish enough, as soon as there are adults in the liver something new happens. A growth factor, called ortho-phospho-tyrosine<sup>5</sup> appears. A monster has been born! Growth factors make cells divide. Now your cells will begin to divide too! Now you have cancer.

### Now You Have Cancer

The presence of ortho-phospho-tyrosine is the beginning of your cancer. Unless you act quickly to kill this parasite-spawning machine, it will take over your body.

But first, let's sit back and think for a minute. Why is this parasite multiplying feverishly in your organs instead of living quietly in your intestine? Because having propyl alcohol in your body allows its development outside of the intestine. A parasite is simply doing what all living things must do—survive and reproduce. It is not the fiendish nature of this parasite that has given you cancer. It is the tragic pollution of your body with propyl alcohol that is at fault. And, of course, the infestation of our food animals and household pets with fluke parasites.

It is quite possible that the *rediae* or *cercariae* produce the ortho-phospho-tyrosine in order to help themselves divide while reproducing. Or perhaps they induce your body to make it (I have preliminary evidence that epidermal growth factor, EGF, is also produced somehow). These growth stimulants are not intended to make your cells multiply at all. Normally the parasite stages are developing in a pond full of snails! This parasite wasn't meant to go through its life cycle in our bodies. But since our bodies

respond to ortho-phospho-tyrosine (and EGF) the same way, our cells are forced to multiply and multiply and multiply along with the fluke stages.

### Purge The Parasite, Cure The Cancer

The good news is that when the fluke and all its stages have been killed, the ortho-phospho-tyrosine disappears. In 24 hours all ortho-phospho-tyrosine is gone!

Why do the microscopic fluke stages choose the cervix or prostate or lung in which to settle for reproduction? Perhaps it is because the cancerous organ has lost its immune power for you, so that it cannot catch and kill the tiny invaders. After all, there is propyl alcohol in the cancerous tissue, and many other toxins as well. Heavy metals such as mercury and barium are there. Lanthanide metals like yttrium and hafnium are there. Common toxins like arsenic and radon are there. PCBs are there. Is it just a coincidence that the parasite survives and reproduces itself best in your most unhealthy organs?

Clearly, you must do three things:

(1) Kill the parasite and all its stages.

(2) Stop letting propyl alcohol into your body.

(3) Flush out the metals and common toxins from your body so you can get well.

### Parasite Remedies

The Native American peoples knew that humans are parasitised. Other native peoples from the Arctic to Antarctic knew that we are parasitised like other animals. They had frequent purgings that included diarrhoea or vomiting to rid themselves of their slimy invaders. Many cultures continued such practices right up to my own childhood. I remember being

forced to swallow a spoonful of sulphur and molasses and raw onion! How dreadful it seemed. But it reduced the body's burden of worms and other parasites that we all have. Where have we gone astray? Why have we forsaken these wise practices? I have seen that eczema is due to roundworms. Seizures are caused by a single roundworm, *Ascaris*, getting into the brain. Schizophrenia and depression are caused by parasites in the brain. Asthma is caused by *Ascaris* in the lungs. Diabetes is caused by the pancreatic fluke of cattle, *Eurylrema*. Migraines are caused by the threadworm, *Strongyloides*. Acne rosacea is caused by a *Leishmania*. Much human heart disease is caused by dog heart-worm, *Dirofilaria*. And the list goes on.

Getting rid of all these parasites would be absolutely impossible using clinical medicines that can kill only one or two parasites each. Such medicines also tend to make you quite ill. Flagyl™ is used for amoebas and *Giardia*; when the correct dosage is used, it can cause extreme nausea and vomiting. Quinine for malaria is quite toxic. Imagine taking 10 such drugs to kill a dozen of your parasites! Good news, perhaps, for the drug makers but not for you.

Yet three herbs can rid you of over 100 types of parasites! And without so much as a headache! Without nausea! Without any interference with any drug that you are already on! Does this sound too fantastic? Just too good to be true? They are nature's gift to us. The herbs are: black walnut hulls (from the black walnut tree), wormwood (from the *Artemisia* shrub), and common cloves (from the clove tree).

**Why is this parasite multiplying feverishly in your organs instead of living quietly in your intestine? Because having propyl alcohol in your body allows its development outside of the intestine.**

These three herbs must be used **together**. Black walnut hull and wormwood kill adults and developmental stages of at least 100 parasites. Cloves kill the eggs. Only if you use them together will you rid yourself of parasites. If you kill only the adults, the tiny stages and eggs will soon grow into new adults. If you kill only the eggs, the million stages already loose in your body will soon grow into adults and make more eggs. **They must be used together as a single treatment.**

It is the green hull surrounding the nut of the black walnut tree that has this miraculous parasiticide. After it has turned black, it is useless. The large green balls fall to the ground early in the fall. In a week or two they will be black and decaying. Therefore, anyone wishing to make parasiticide must be careful not to let the critical time for harvesting pass. I encourage everyone to make their own parasiticides and to take back the responsibility for keeping themselves and their families free of these tiny monsters. The recipe for Black Walnut Hull Tincture is given in the Recipes section of the book.

Note that it is a tincture (extracted using grain alcohol), not an ordinary extract (which uses water). The black walnut extract that is available from herb companies is not potent as a parasiticide. It is black, not pale green, indicating that the critical harvesting time has passed. Of course there is no time to make your own if you have fast-growing or metastasising cancer.

You will only need one 1 oz. bottle. While you are waiting for it to arrive, get your other two herbs ready—wormwood and cloves.

Wormwood consists of the leaves of the *Artemisia* shrub. My recommendation is that you grow it yourself if you have any space to do so.

The amount you need to cure a cancer is very small, yet you cannot do without it. But the FDA (Food and Drug Administration) has regulated it as toxic! It is therefore unavailable in concentrated form from herb companies. The evidence for toxicity accepted by the FDA must have been hearsay. I have never seen a case of toxicity, not so much as a headache or nausea.<sup>6</sup> The toxic level must be much higher than is needed to kill these parasites.

This shrub is called wormwood for good reason: it kills worms! There is quite a bit of confusion over which *Artemisia* is the true wormwood. Books and nurseries can be wrong, even though they assure you they are correct! Buy *Artemisia absinthium* for your garden. Wormwood goes back to antiquity and is mentioned in the Bible.

If you grow your own, dry the leaves when they are in their prime. The leaves are greenish silvery grey and quite bitter. Nobody would accidentally eat too much of them. For a child, roll up a single leaf and put it into a capsule or shred it and stir into honey.

Wormwood capsules are available as a combination of *Artemisia*, male fern, *Quassia*, black walnut leaves and cloves. This small amount of *Artemisia* is legal.

You will need one bottle of 80 Wormwood Combination capsules to cure your cancer, and another bottle to kill your remaining parasites.

The third herb necessary to cure cancer is cloves. This is the

common spice used in baking. It needs to be ground up in order to release its parasite-killing properties. You can buy a can of whole cloves and grind them in a blender or grinder. Store-bought ground cloves do not work! Their parasite-killing properties have evaporated long ago. Ground cloves from a health food store or herb shop may not work either! They may have been ground years ago. Don't take a chance, grind your own. Remember, the responsibility of the cloves is to kill eggs. Nothing else known can kill **eggs** of parasites within the body!<sup>7</sup> If a herb company were to grind cloves and fill capsules with them right away and store the capsules in closed bottles, the potency of the herb would be protected. Don't take these details for granted. You must question your source and get a satisfactory answer or grind your own.

You will need about 100 capsules of cloves. To make your own, purchase size 00 (double-zero)

capsules at a health food store. (Don't try to mix cloves straight in water! It is much too strong; you may try mixing with apple sauce or buttermilk.) Size 0 capsules will also be acceptable. You now have:

- One 30 cc bottle of pale green Black Walnut Hull Tincture. This is 1 ounce.

- Two bottles of 80 Wormwood Combination capsules or 1/2 cup of *Artemisia* leaves gathered from a friendly neighbour's shrub.

- One bottle of 100 capsules of freshly-ground cloves or 1/3 cup bulk.

These are the only essential items that you will need to cure your cancer.

But there are two non-essential items, ornithine and arginine, that

improve this recipe. Parasites produce a great deal of ammonia as their waste product. Ammonia is their equivalent of urine and it is set free in our bodies by parasites in large amounts. Ammonia is very toxic, especially to the brain.<sup>8</sup>

I believe this causes insomnia and other sleep problems at night and anxiety by day. By taking ornithine at bedtime, you will sleep better.<sup>9</sup> Arginine has similar ammonia-reduction effects but must be taken in the morning because it gives alertness and energy.

Do not try to substitute drugs for herbs. Drug parasiticides can be extremely toxic, even in the small doses needed. Nor do they kill all the stages.

### Preventing Reinfection

It only takes five days on the three herbs together to kill the intestinal fluke adults, eggs, *miracidiae*, *rediae*, *cercariae* and *metacercariae*. The parasite-killing program continues, though, to a peak at three weeks, followed by a fairly high dose for another two months, in order to rid your body of most other parasites. After this, a maintenance program is followed in order to kill any new parasite that you pick up.

You can see from the case histories that this recipe fails to kill a few die-hard parasites like tapeworm scolex (head) and tapeworm cysticeroids (cysts). If the parasite program always makes you feel better, and discontinuing it brings your symptoms back, you probably have what I call 'tapeworm disease'. I have seen that tapeworm cysts 'hatch' every time you get a dose of solvents in foods or products. This spews infertile eggs all over your body, making you feel sick.

- **Adult flukes in your liver, if you have propyl alcohol in it, cause cancer!**
- **Adult flukes in your pancreas, if you have wood alcohol in it, cause diabetes!**
- **Adult flukes in your thymus, if you have benzene in it, cause HIV disease!**
- **Adult flukes in your brain, if you have toluene or xylene in it, cause Alzheimer's disease!**
- **Adults in your kidneys cause Hodgkin's disease, in your uterus, endometriosis, or in your prostate, chronic prostatitis, if you have other solvents there!**
- **Adult flukes in your skin, you have Kaposi's sarcoma.**

You are always picking up parasites! Parasites are everywhere around you! You get them from other people, your family, yourself, your home, your pets, and undercooked meat! I believe the **main source of the intestinal fluke is undercooked meat.** After we are infected with it this way, we can give it to each other through blood, saliva, semen, and breast milk, which means kissing on the mouth, sex, nursing, and child-bearing.

Stay on a maintenance program of killing parasites. Give yourself a high-dose program twice a year. Family members nearby always have the same parasites. If one person develops cancer, the others probably have the intestinal fluke also. They should give themselves the same de-parasitising program.

### Parasites Gone, Propyl Alcohol Next

Now that you have killed the intestinal fluke and cured your cancer, what's next? Two tasks remain:

- (1) Stop getting propyl alcohol into your body;
- (2) Get rid of the heavy metals and common toxins in your body, diet and home. This will heal the damaged tissues.

Propyl alcohol is the antiseptic commonly used in cosmetics. Check all your cosmetics for the word "propanol" or "isopropanol" on the label. It is usually put on the label, since it is not currently suspected of causing cancer.<sup>10</sup> I don't know if propyl compounds like propamide, propacetamide, propyl gallate or calcium propionate could be converted by the body to propyl alcohol, so don't take chances. Do not use anything that has "prop" in the list of ingredients. Don't give your discarded cosmetics to anybody. Don't save them. Don't have them in the house anywhere. Throw them out.

Remember, 100 per cent of cancer patients have the solvent propyl alcohol accumulated in the liver and in their cancerous tissues. People without cancer do not have propyl alcohol in their livers. Look at the case histories. Often one spouse has cancer: you can note that she or he has propyl alcohol and the adult fluke in the liver. Ortho-phospho-tyrosine is present in an organ like the lung where the cancer is developing. But the other spouse does not have cancer although he or she shares the parasite. For him or her it is only in the intestine. There are no eggs or other stages anywhere. There is no solvent present!

Here is a list of common body products that may have propyl alcohol in them: cosmetics, shampoo, hair spray, mouthwash, mousse, body lotions, shaving supplies and, of course, rubbing alcohol. If in doubt, throw it out!

### Review

The intestinal fluke can reproduce itself from beginning to end inside your body (not needing a snail) if you have solvent in your body. There are many solvents around us. If the solvent is propyl alcohol which accumulates in the liver, new adults develop in the liver and cancer begins. A growth factor, ortho-phospho-tyrosine, is produced which makes cells divide. The adult is in the liver but the growth factor is far away in the organs that have propyl alcohol and fluke stages in them. They reproduce by the thousands and your organ cells are forced to reproduce along with them. This is cancer.

Propyl alcohol is not detoxified by the liver but, instead, accumulates, possibly because of aflatoxin B, found in mouldy food. The liver succeeds in getting rid of some of the propyl alcohol by dumping it through the bile ducts into the intestine. It leaves with the bowel movement. But in the intestine the alcohol encounters millions of fluke eggs. Since propyl alcohol is a solvent, I think it dissolves the shells of the eggs and lets them all hatch! Right inside you! The tiny baby stages (*miracidiae*) then get into your blood and travel everywhere in your body! They land, become

rediae, and reproduce into thousands more! They finally turn into *cercariae*, *metacercariae*, and finally adults.

- Adult flukes in your liver, if you have propyl alcohol in it, cause cancer!
- Adults in your pancreas, if you have wood alcohol in it, cause diabetes!
- Adults in your thymus, if you have benzene in it, cause HIV disease!
- Adults in your brain, if you have toluene or xylene in it, cause Alzheimer's disease!
- Adults in your kidneys cause Hodgkin's disease, in your uterus, endometriosis, or in your prostate, chronic prostatitis, if you have other solvents there!
- Adults in your skin, you have Kaposi's sarcoma.

### Footnotes:

1. Cancerous cells are thought to have a special property called "malignancy". This belief is based on scientific experiments which show that when cells are cultured in the laboratory, they become malignant in an orderly progression from initiation, through promotion, finally transformation. Transformation is irreversible. The tissue is now "malignant" and cannot be changed back. But is this really what happens in the human body?
2. Chemically, I am referring to isopropyl alcohol, not n-propyl alcohol.
3. C. H. Barlow, "The Life Cycle of the Human Intestinal Fluke *Fasciolopsis buskii*", *Am. J. Hyg.* (Lancaster), Monog. no. 4, 1925.
4. Perhaps it is the changed electrical charge or magnetic force of these damaged organs that permits further development of the fluke stages. Perhaps it is merely low immune-surveillance. Perhaps the dying cells of a damaged organ provide food for the baby stages. Only further scientific study will reveal the truth.
5. Ortho-phospho-tyrosine is one of over two dozen 'cancer markers' (indicators); it is present in cancerous tissues. The enzyme that makes it can be inhibited by genisteine. Genisteine can be isolated from red clover blossoms! Red clover blossoms are one of the best-known traditional anti-cancer herbs! See the *Merck Index*, 10th ed., p. 626. Genisteine 4'-Methyl ether is also called Biochanin A. More recently, genisteine is derived from bacterial sources.
6. Of course, the FDA cannot be expected to accept experiences such as mine. We should find out what evidence they did accept.
7. This anti-cancer action of cloves was not discovered by me, but by a neighbouring health practitioner, using a kinesiological technique she developed herself. We owe her our deepest gratitude. Not all scientific truth comes from the classically trained!
8. The brain lacks the enzyme ornithine carbonyltransferase, essential for making ammonia harmless by changing it into urea.
9. I published this discovery in *Townsend Letter For Doctors*, July 1991, p. 554.
10. Many people use cosmetics with propanol in them and do not develop cancer. The propanol is detoxified for them by their livers. Eating mouldy food with aflatoxins in it, poisons the liver's ability to detoxify propanol.

### Resource Information:

Vitamins, Herbs and Supplements recommended by Dr Hulda Clark can be obtained from several sources, including:
